

Your Android App will contain 3 custom artwork assets:

- **App Icon** - This is used on the Google Play Store listing, and on the home screen of the device
- **Station Logo** - This is displayed on the 'Now Playing' screen (Above the track artwork). By default this is your Radio.co station's logo however you can upload different artwork. This is ideal for adding information about upcoming events.
- **Background Image** - This is displayed behind the main content of the 'Now Playing' screen. We strongly advise not to include text on this image. As the App is designed to work on various device sizes, text may be covered or cut off.

Important Notes:

No images can contain brand logos (e.g. Apple, Android, Tunein.com, Google) or images of devices (e.g. iPads, iPhones, Android Tablets). Images must not contain copyrighted content (e.g. photos of celebrities) unless you hold the rights of use. Explicit graphics are prohibited from the Google Play Store.

Asset Specs:

- Icon - **1024x1024px** PNG format, transparency permitted
- Station Logo - **512x512px** PNG, transparency permitted
- Background - **1024x1024px** PNG or JPG format, no transparency permitted.

If you upload assets that are not square, or are bigger than the dimensions above, the system will crop/resize automatically.

Included with this guide are PNG template files. These can be opened in popular editing software such as Adobe Photoshop Elements so you can create high quality imagery.

If you have any questions about artwork please contact support: help@radio.co
